

```
#include <iostream>
using namespace std;

class Rectangle
{
    int length, width;

public:
    Rectangle()
    {
        length = 10;
        width = 5;
    }

    void display()
    {
        cout << "Length = " << length << endl;
        cout << "Width = " << width << endl;
        cout << "Area = " << length * width << endl;
    }
};

int main()
{
    Rectangle r;

    r.display();

    return 0;
}
```
